

I wish to inform you that I fully support the well founded Comment submitted by The American Radio Relay League concerning Docket ET 03-104. The comments made by proponents of Broadband over Power Line (BPL) lack any credible scientific data to support approval of this docket at this time. Continued research and technological improvements are required to make sure that this infant BPL technology will not cause irreparable interference to long standing services licensed to operate in the 2 MHz - 80 MHz frequency range. Approval of ET 03-104 would violate the existing FCC rules regarding non-interference and would not be in the public's best interest.
